## Secondary TruRegs™

Have you ever balanced your draught system and still had pouring problems? Our years of experience have been plagued by system issues that our math should solve. We decided to look into what causes these problems.

During our research, we found that most secondary regulators on the market experience a significant pressure drop before gas even flows, causing pressure issues in the line and the keg. We knew there had to be a better solution, so we designed one!

Here is our new line of Secondary TruRegs™. These accurate regulators have minimal pressure drop and are easily repaired and replaceable in the field.

### Part #

- STR-1 TruRegs™ Single
- STR-2 TruRegs™ Double
- STR-3 TruRegs™ Triple
- STR-4 TruRegs™ Quad
